Technology

- AR by Niantic, LBS by Mapbox

Mirror planet provides real-world, real-time location mobile experiences which build upon real map imagery. Mirror planet also uses Niantic's Lightship AR engine; the same technology that powers Pokemon Go.

Our collaboration with Niantic further strengthens our technical and marketing capabilities.

LBS with global coverage powered by mapbox

AI TECHNOLOGY

Our unique AI character Gina is your personal assistant that provides: guidance of gameplay, local assistant when you travel to a new POI, chat as your companion, tutoring a new language, suggest cooking recipes and many more.

Imagine having an AI NPC as your ultimate promoter! With pre-set information from you, the AI NPC can engage with local players and generate buzz. For instance, a music concert organizer could employ our AI NPC to roam the city, talking to strangers about their love for the singer and their anticipation for the limited ticket sales. It's a revolutionary way to spread the word and create excitement for your events. Unlock the potential of AI promotion with us!

Gina

"Hi, it's great to see you here. Would you like to hang out now?"

Gamify Social
